

“ My wife is a heavy smoker and within a few days the smoke odors were essentially gone. We are even sleeping better at night. We attribute that to the reduced amount of airborne particles which aggravate our sinuses and create allergy problems.

- Stephen Y, Kearny, NJ

“ We would highly recommend this system to everybody. My allergies are almost non-existent and our beautiful new home always smells fresh, even after cooking fish or garlic.

- Jack R, Blue Springs, MO

Why Purify Indoor Air?

Humans spend up to 90% of their time inside buildings, inhaling thousands of gallons of indoor air every day.

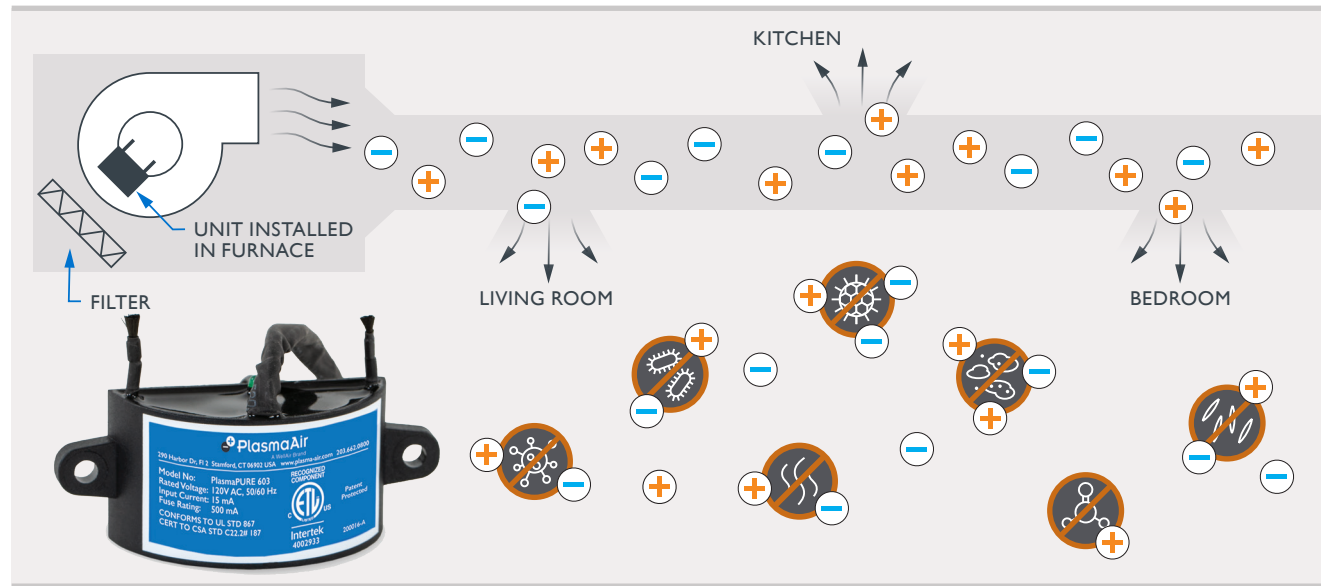

The air inside the typical home is filled with invisible yet harmful pollutants such as bacteria, viruses, mold spores, VOCs, dust, pet dander and pollen. These pollutants can trigger asthma, allergies, headaches, infections and respiratory conditions.

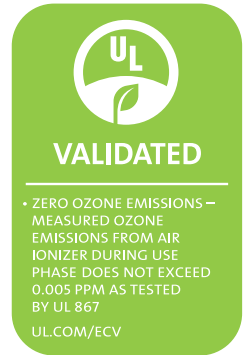

How It Works

PlasmaPURE products replicate nature's process for cleaning the air by producing positive and negative ions that interact with and neutralize pollutants in the air. The PlasmaPURE unit fits seamlessly into the home's existing HVAC system for continuous whole-home air purification. Once installed, the products are silent, invisible and worry-free - requiring little or no maintenance.

Safe Haven For Your Family

PlasmaPURE products do not produce harmful byproducts, are ozone-free and are safe for continuous use around your family and pets to neutralize and inactivate viruses, bacteria, mold, pollen, dust, VOCs and odors.

Mountain Air Quality in Your Home

PlasmaPURE products are always working inside your HVAC system to silently, invisibly and safely neutralize airborne pollutants.

- Reduce Odors and VOCs
- Reduce Bacteria
- Reduce Mold Spores
- Reduce Dust Particles
