

WELLAIR
It's that important

A breath of fresh air

INDOORS

Advanced Air Cleaning Solutions

Why indoor air matters

Indoor air is **5 times more contaminated** than outside air. Yet, we spend 90% of our time inside.¹

Aerosolized **pathogens can stay in our air for long periods of time** and remain contagious. We now know that SARS-CoV-2 – the virus that causes COVID-19 – is predominantly spread by airborne transmission.²

The air inside the typical home is filled with invisible yet **harmful pollutants that can trigger illnesses** such as asthma, allergies, headaches, infections and respiratory conditions.

Studies show that **improving indoor air quality can improve overall health** and wellbeing such as sleep, cognitive ability and productivity.

Introducing Plasma Air

PlasmaPURE 600 Series, AutoClean 1500 and 7000 Series

SILENT – FILTERLESS – SELF-CLEANING

The Plasma Air unit fits seamlessly into the home's existing HVAC system for continuous whole-home air purification. From small to large residences, there is a solution that fits your needs. And once installed, the products are silent, invisible and worry-free – requiring little or no maintenance.

PlasmaPURE 600 Series

PlasmaPURE AutoClean 1500

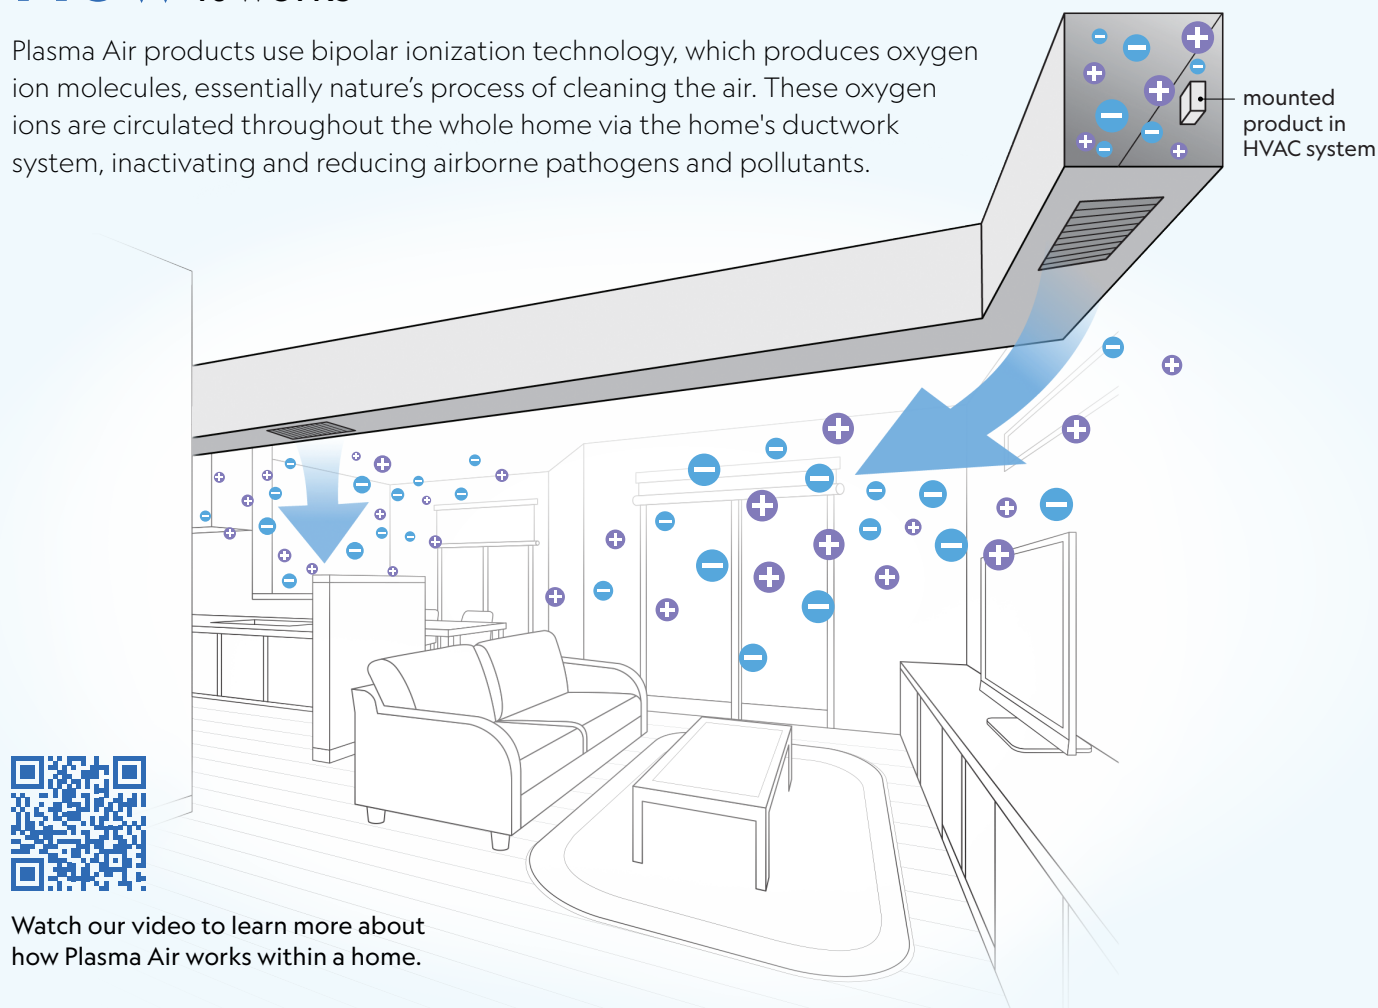

PlasmaPURE 7000 Series

How it works

Plasma Air products use bipolar ionization technology, which produces oxygen ion molecules, essentially nature's process of cleaning the air. These oxygen ions are circulated throughout the whole home via the home's ductwork system, inactivating and reducing airborne pathogens and pollutants.

Watch our video to learn more about how Plasma Air works within a home.

Oxygen ions are created and circulated through the home's ductwork system

These ions bond with harmful pathogens such as viruses and bacteria and are inactivated

Odorous gases are neutralized by oxygen ions

The ions cluster with other pollutants to create larger particles that are removed from the breathing zone

A safe haven for your family

Plasma Air products are safe for continuous use around people and pets, produce no harmful byproducts and are UL 2998 validated for zero ozone emissions.

Proven **effective**

The Plasma Air products have gone through rigorous testing by independent laboratories to ensure that they're proven both safe and effective.

Testing has proven reduction on the following viruses, bacteria and VOCs:

99.99% reduction of the SARS-CoV-2 virus, within 90 mins (AutoClean 1500)

99.94% reduction of the Omicron variant, within 90 mins (PA 660)

99.43% reduction of the *Escherichia coli*, within 120 min (PA 7000 Series)

80% reduction of VOC concentration within 6 hrs (PA 660)

How will I know **it is working**

Particles in the air

Have you ever noticed those tiny particles floating in the air when the sun shines in? Ionization removes those particles from the air.

Air filters

Ionization causes particles in the air to cluster creating larger particles that are more easily filtered out of the air. For this, your HVAC air filters will load at a faster rate, especially for the first 90 days.

Dust

The clustered particles that are not caught in the filtration system will settle onto surfaces so you may notice a slight increase in dust on surfaces for up to the first 90 days.

Odors

Ionization neutralizes odors from cooking, pets or smoke, so you'll notice that odors dissipate at a much faster rate.

Mold spores

Ionization inactivates mold spores preventing the growth of any current mold or new mold.

About **WellAir**

WellAir makes the indoor world cleaner and safer. Scientifically proven to help harmonize how we work, live and play. WellAir's patented technologies deliver innovative and powerful air cleaning technology and surface disinfection devices.

Our best-in-class solutions are used worldwide in healthcare, education, commercial and residential settings to create healing, learning, working and living spaces that foster health, productivity and wellbeing.
